

The Original Level Entry Shower System™

Where Elegance Meets Accessibility.

www.vimproducts.com | 919-277-0267

Easy-to-Install

The patented VIM Level Entry Shower System™ comes with a 7/8" thick shower pan that enables curbless shower construction without having to cut, notch, or lower the structural supports beneath the shower.

Shower Pan

Our compression-resistant pan is constructed from 100% recycled ABS plastic and is pre-sloped at 1/4" per foot to a center drain location. The pan is fully customizable and can be cut to fit smaller sizes, or extended using quick-drying patch compound for larger showers.

Waterproofing

The liquid waterproofing supplied with our shower system is applied in conjunction with our isolation fabric to create a high-quality, anti-fracture membrane that will give years of trouble-free showering.

Protection

Our drain system is engineered with a series of weep holes to allow any water that penetrates the shower floor tile to quickly drain back into the waste system. This small but effective feature greatly diminishes the opportunity for mold and mildew to form under your tile.

Universal Design

The VIM Level Entry Shower System™ provides a barrier-free transition between the bathroom floor tile and the bathing area. The center drain design of the VIM Shower System provides stability for bathers as opposed to showers that pitch in a singular direction.

Where Elegance Meets Accessibility

Until recently, barrier-free showers have been primarily associated with handicap accessible bathrooms. The desire for an open-concept, curbless shower has gained in popularity in the residential market. Fortunately, the commercial look that's synonymous with these type showers is finally a thing of the past. The VIM Level Entry Shower System was developed so homeowners can enjoy the beauty of a spa-like bathing experience in the privacy of their own home.

Shower Accessories

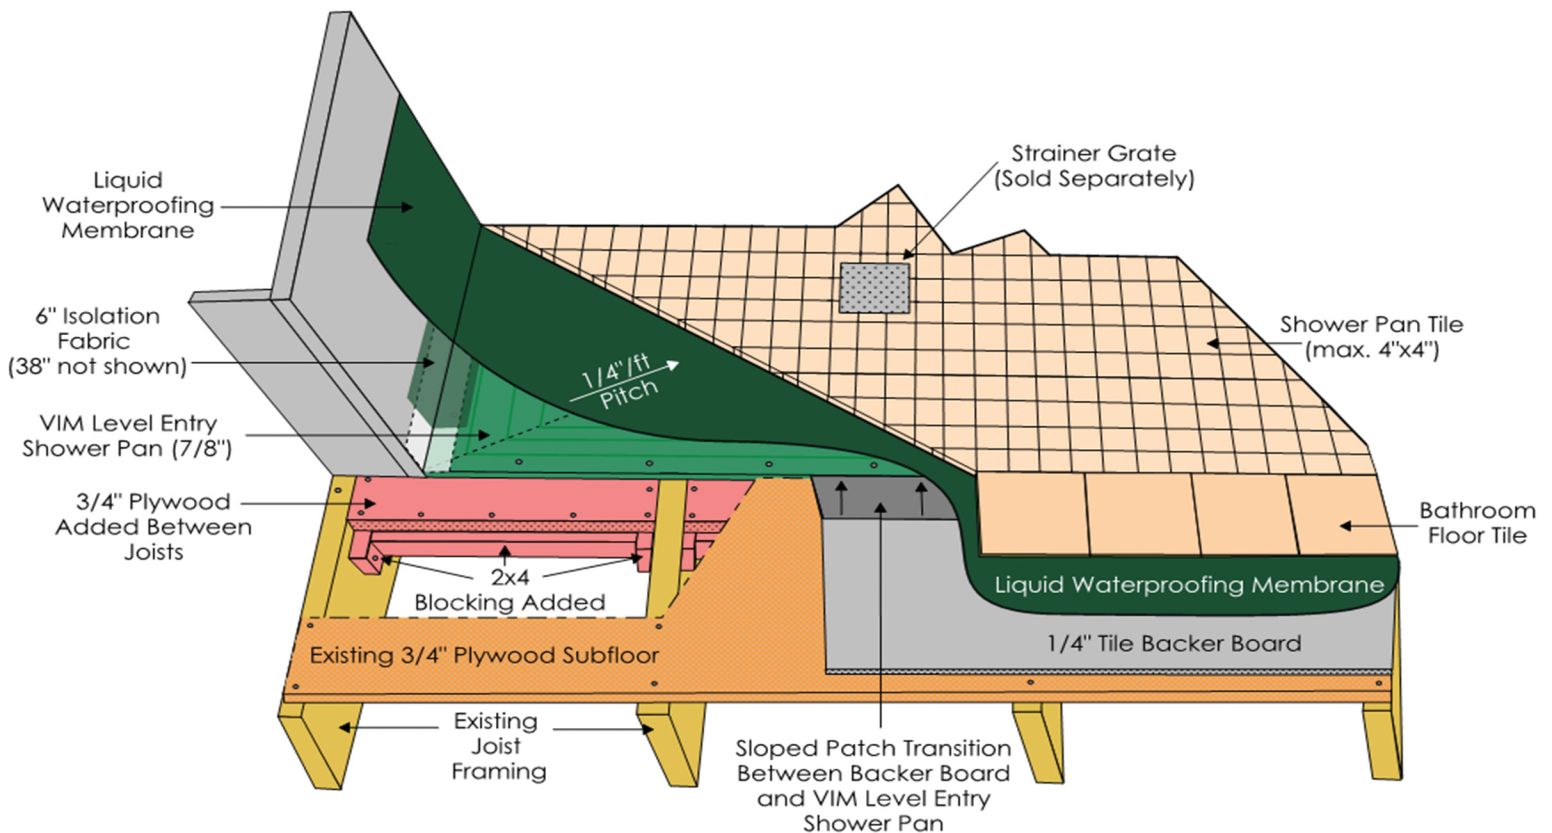

Customize your barrier-free shower even further with our top-quality shower accessories. Folding shower seats, designer grab bars and shampoo shelves in a variety of finishes are just a few of the items that are available to finalize your new shower. Learn more at www.vimproducts.com

Installing the VIM Level Entry Shower System™

Structural Integrity

Our shower pan is a mere 7/8" thick which allows it to be installed without cutting, notching, or lowering any of the supports below the shower. Regardless if your home is constructed using I-joists, traditional joists, engineered trusses, or a concrete slab, the VIM Level Entry Shower System™ is the best choice for the job.

Existing Concrete Floors

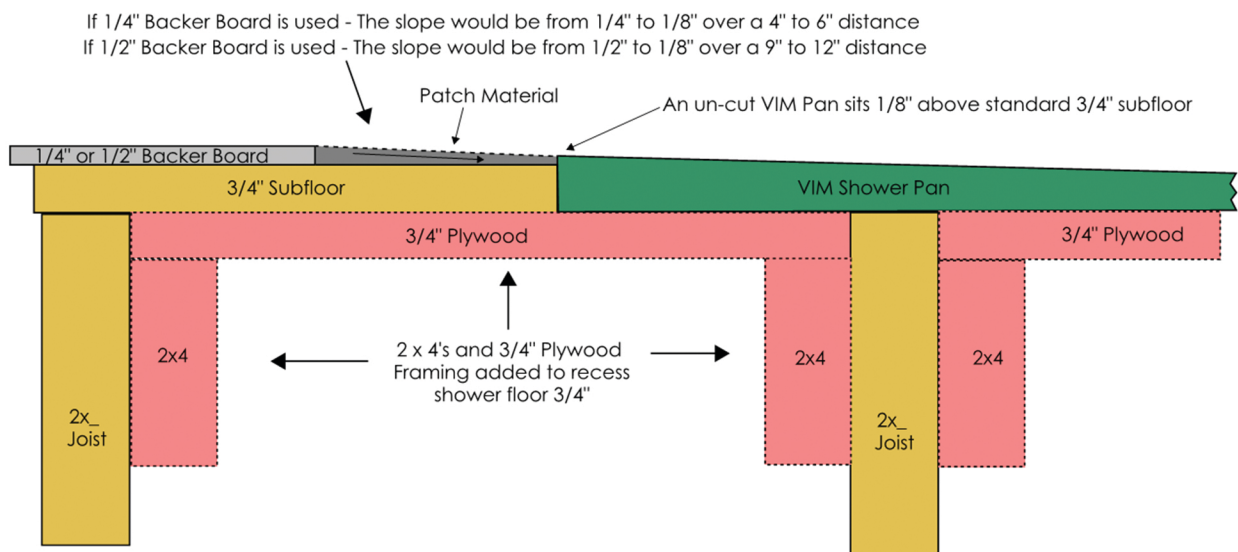

A typical 5'x4' shower installation on an existing concrete floor will only require a cut depth of approx. 1-1/4" in the shower area. The final neoprene drain connection seal is made from the top side.

New Concrete Floors

A typical 5'x4' shower installation on a new concrete floor will only require a stamp-out depth of approx. 1" in the shower area. The final neoprene drain connection seal is made from the top side.

Wood Construction

Whether you're remodeling or building new, a typical shower installation only requires the shower floor area to be recessed 3/4". The final drain connection seal is made from the top side so there's no need to open the ceiling below the shower area.

The VIM Level Entry Shower System™ Kit
